

Artificial Intelligence in Undergraduate Medical Education

Enhancing Clinical
Reasoning Without Replacing
Human Judgment — A Narrative
Review

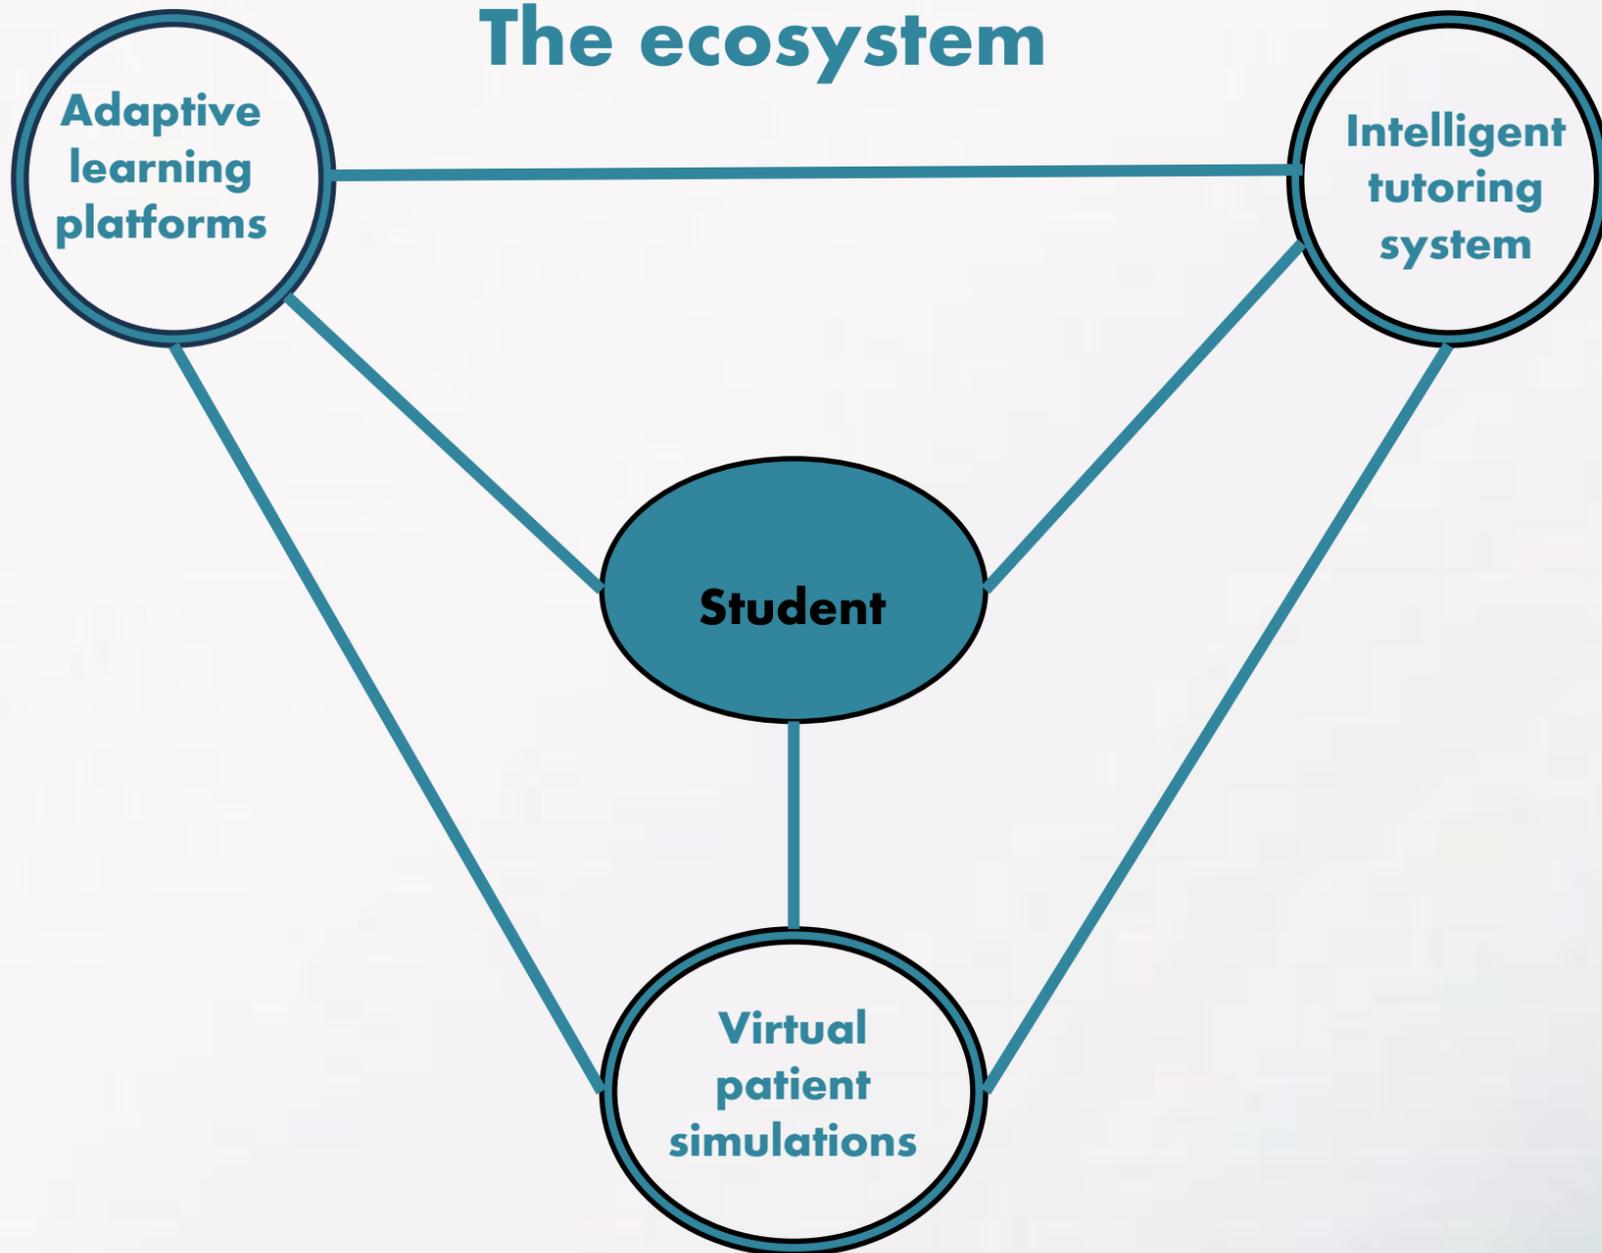

East European University

Presenters: Vasudev Devra, Nathmal Bhati & Ishan Khandekar

The Acceleration of Digital Transformation in Healthcare Education

The ecosystem

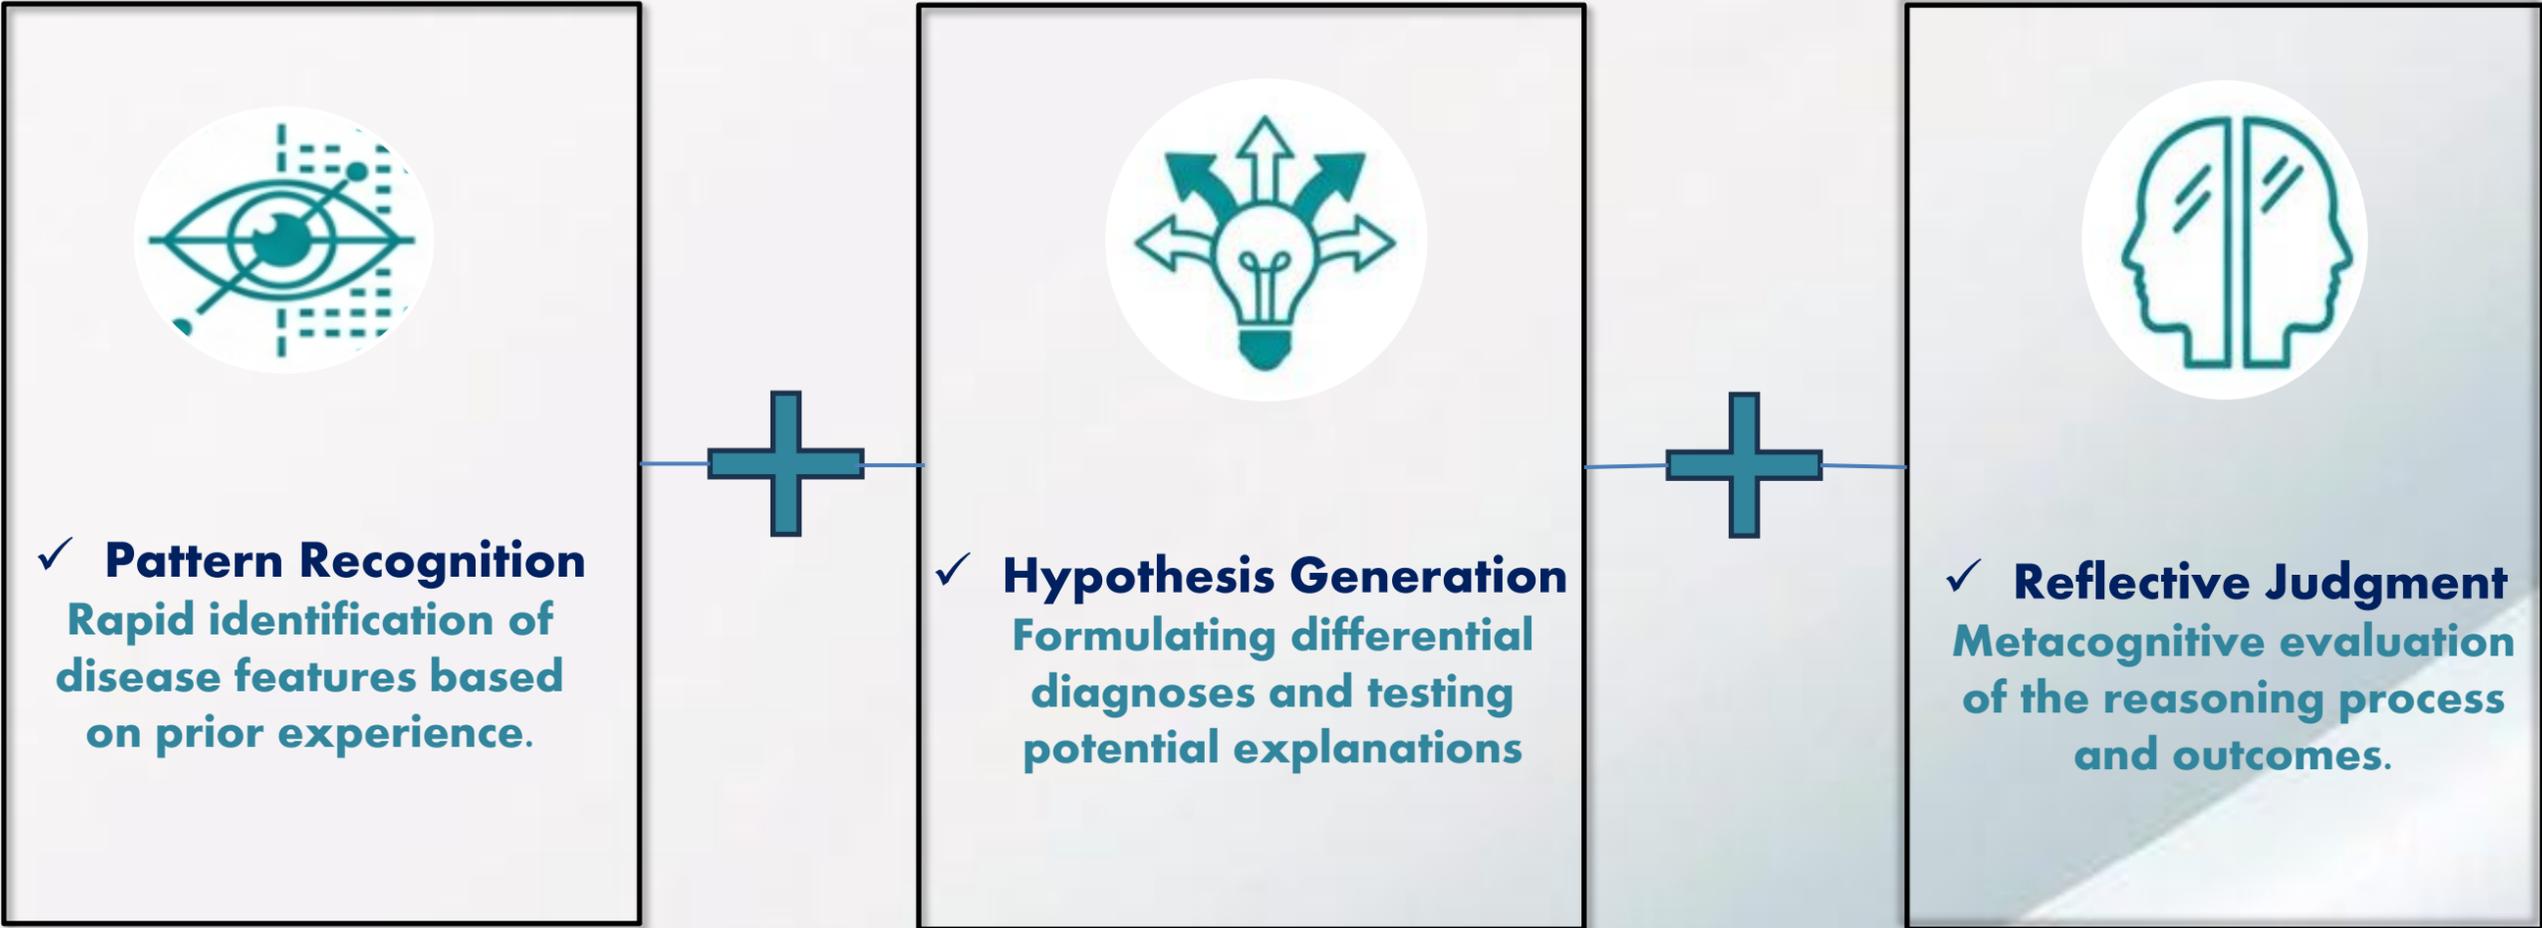

The Shift

Insight: There is an increasing demand for enhanced clinical reasoning skills. AI is not new, but its educational integration is accelerating.

Clinical Reasoning is the Core Competency of Medical Professionalism

Diagnostic Accuracy

The Challenge: Traditional teaching suffers from limited patient exposure, variable feedback mechanisms, and severe time constraints

The Proposition: AI serves as a structured cognitive scaffold to bridge these gaps.

Defining the Scope of AI in Pedagogical Strategy

01

Role of Tools:

- Examining AI-assisted educational tools in enhancing clinical reasoning

02

Evidence Base:

- Evaluating evidence supporting AI-driven learning systems.

03

Risk Assessment:

- Identifying risks of overreliance on algorithmic guidance.

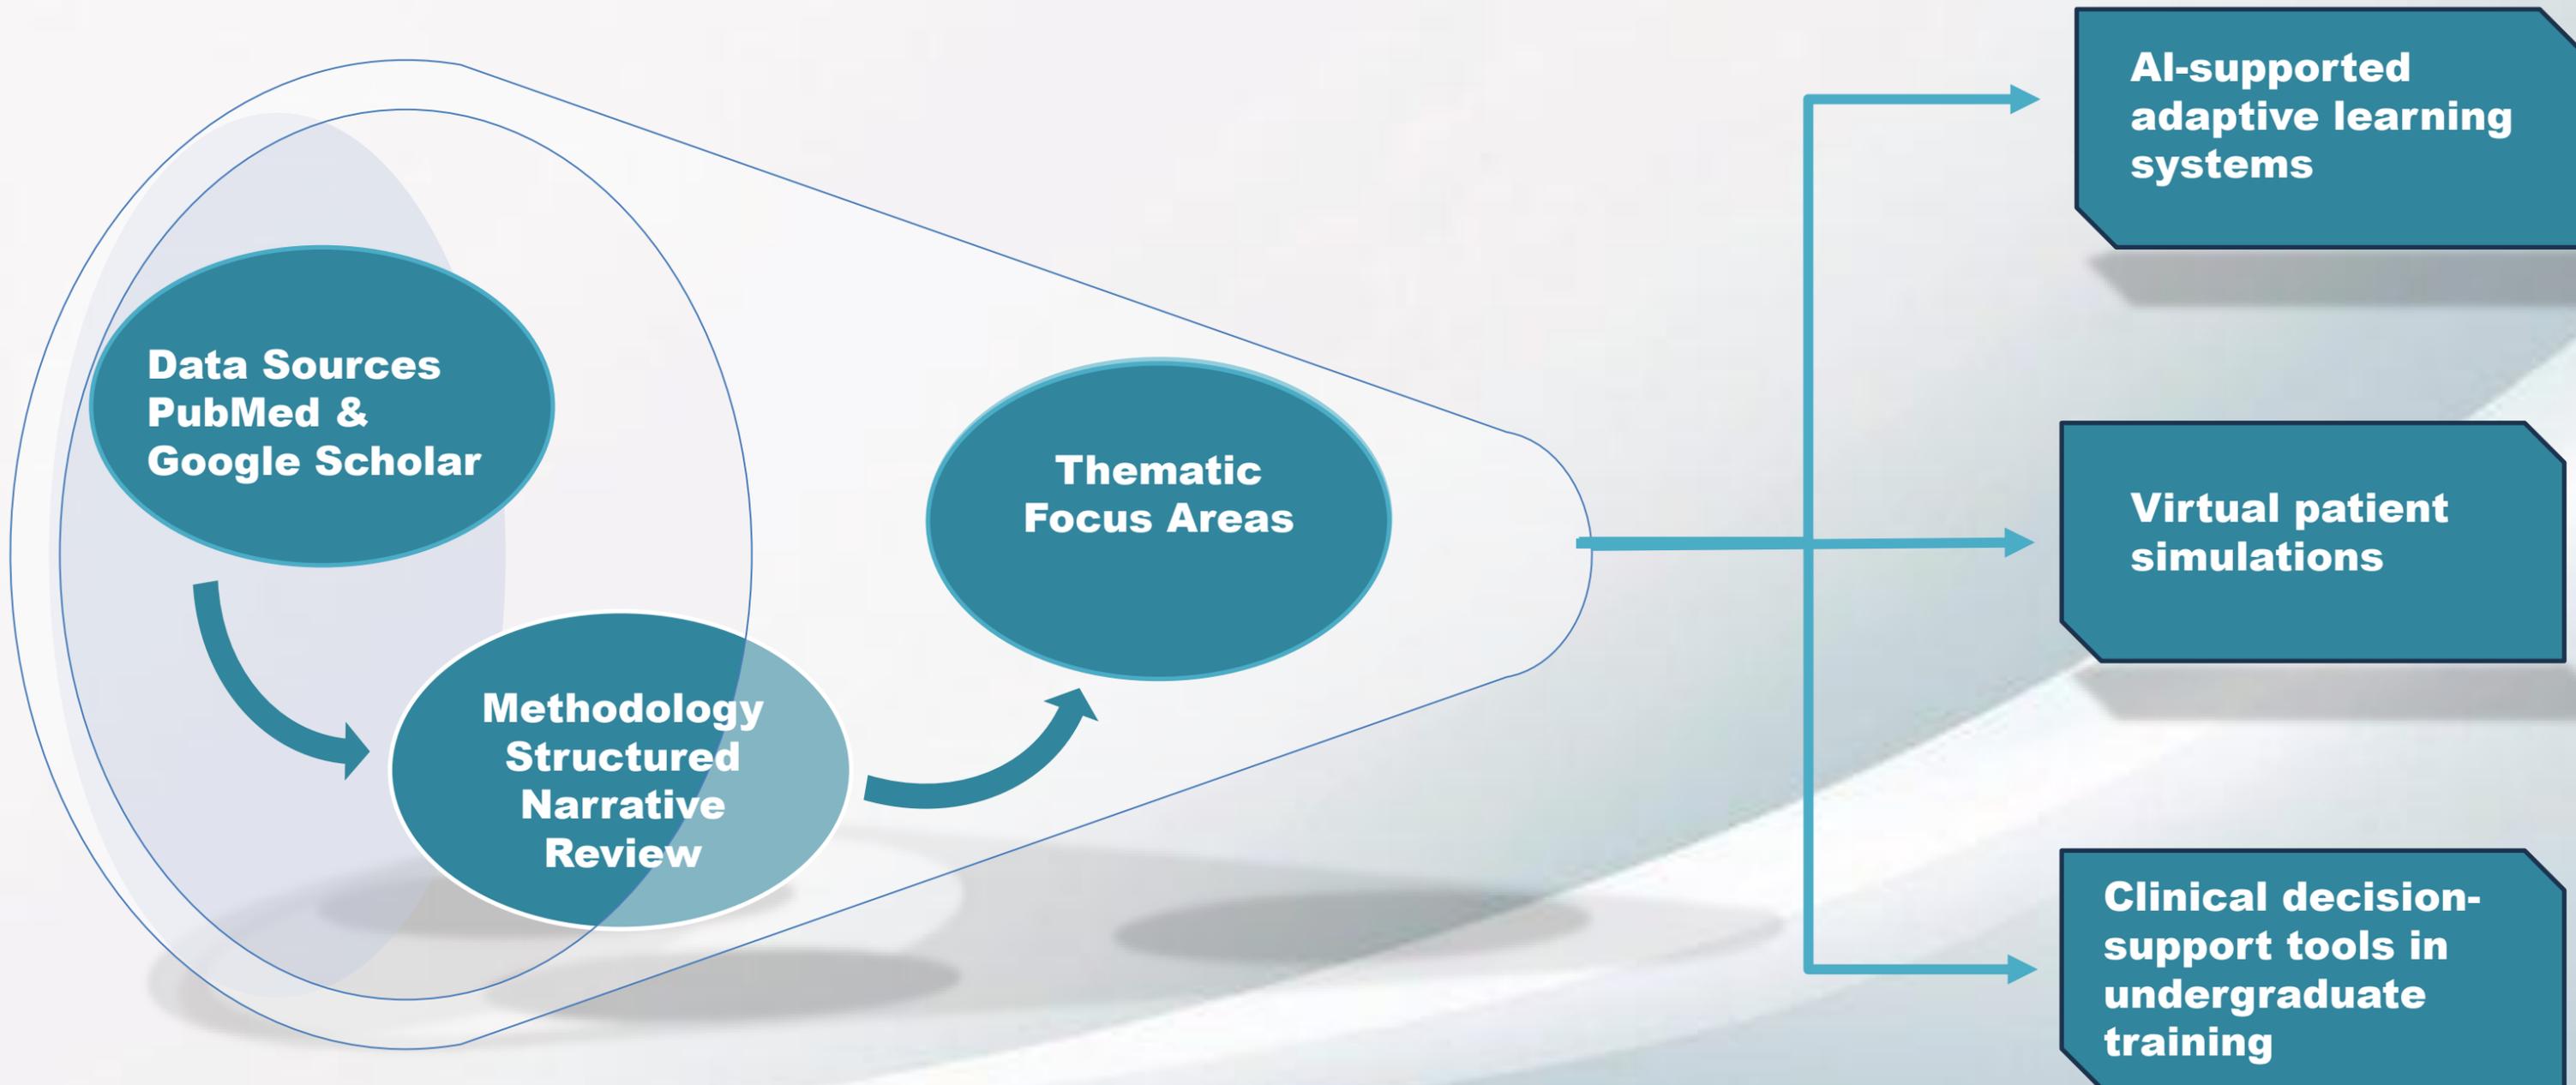

04

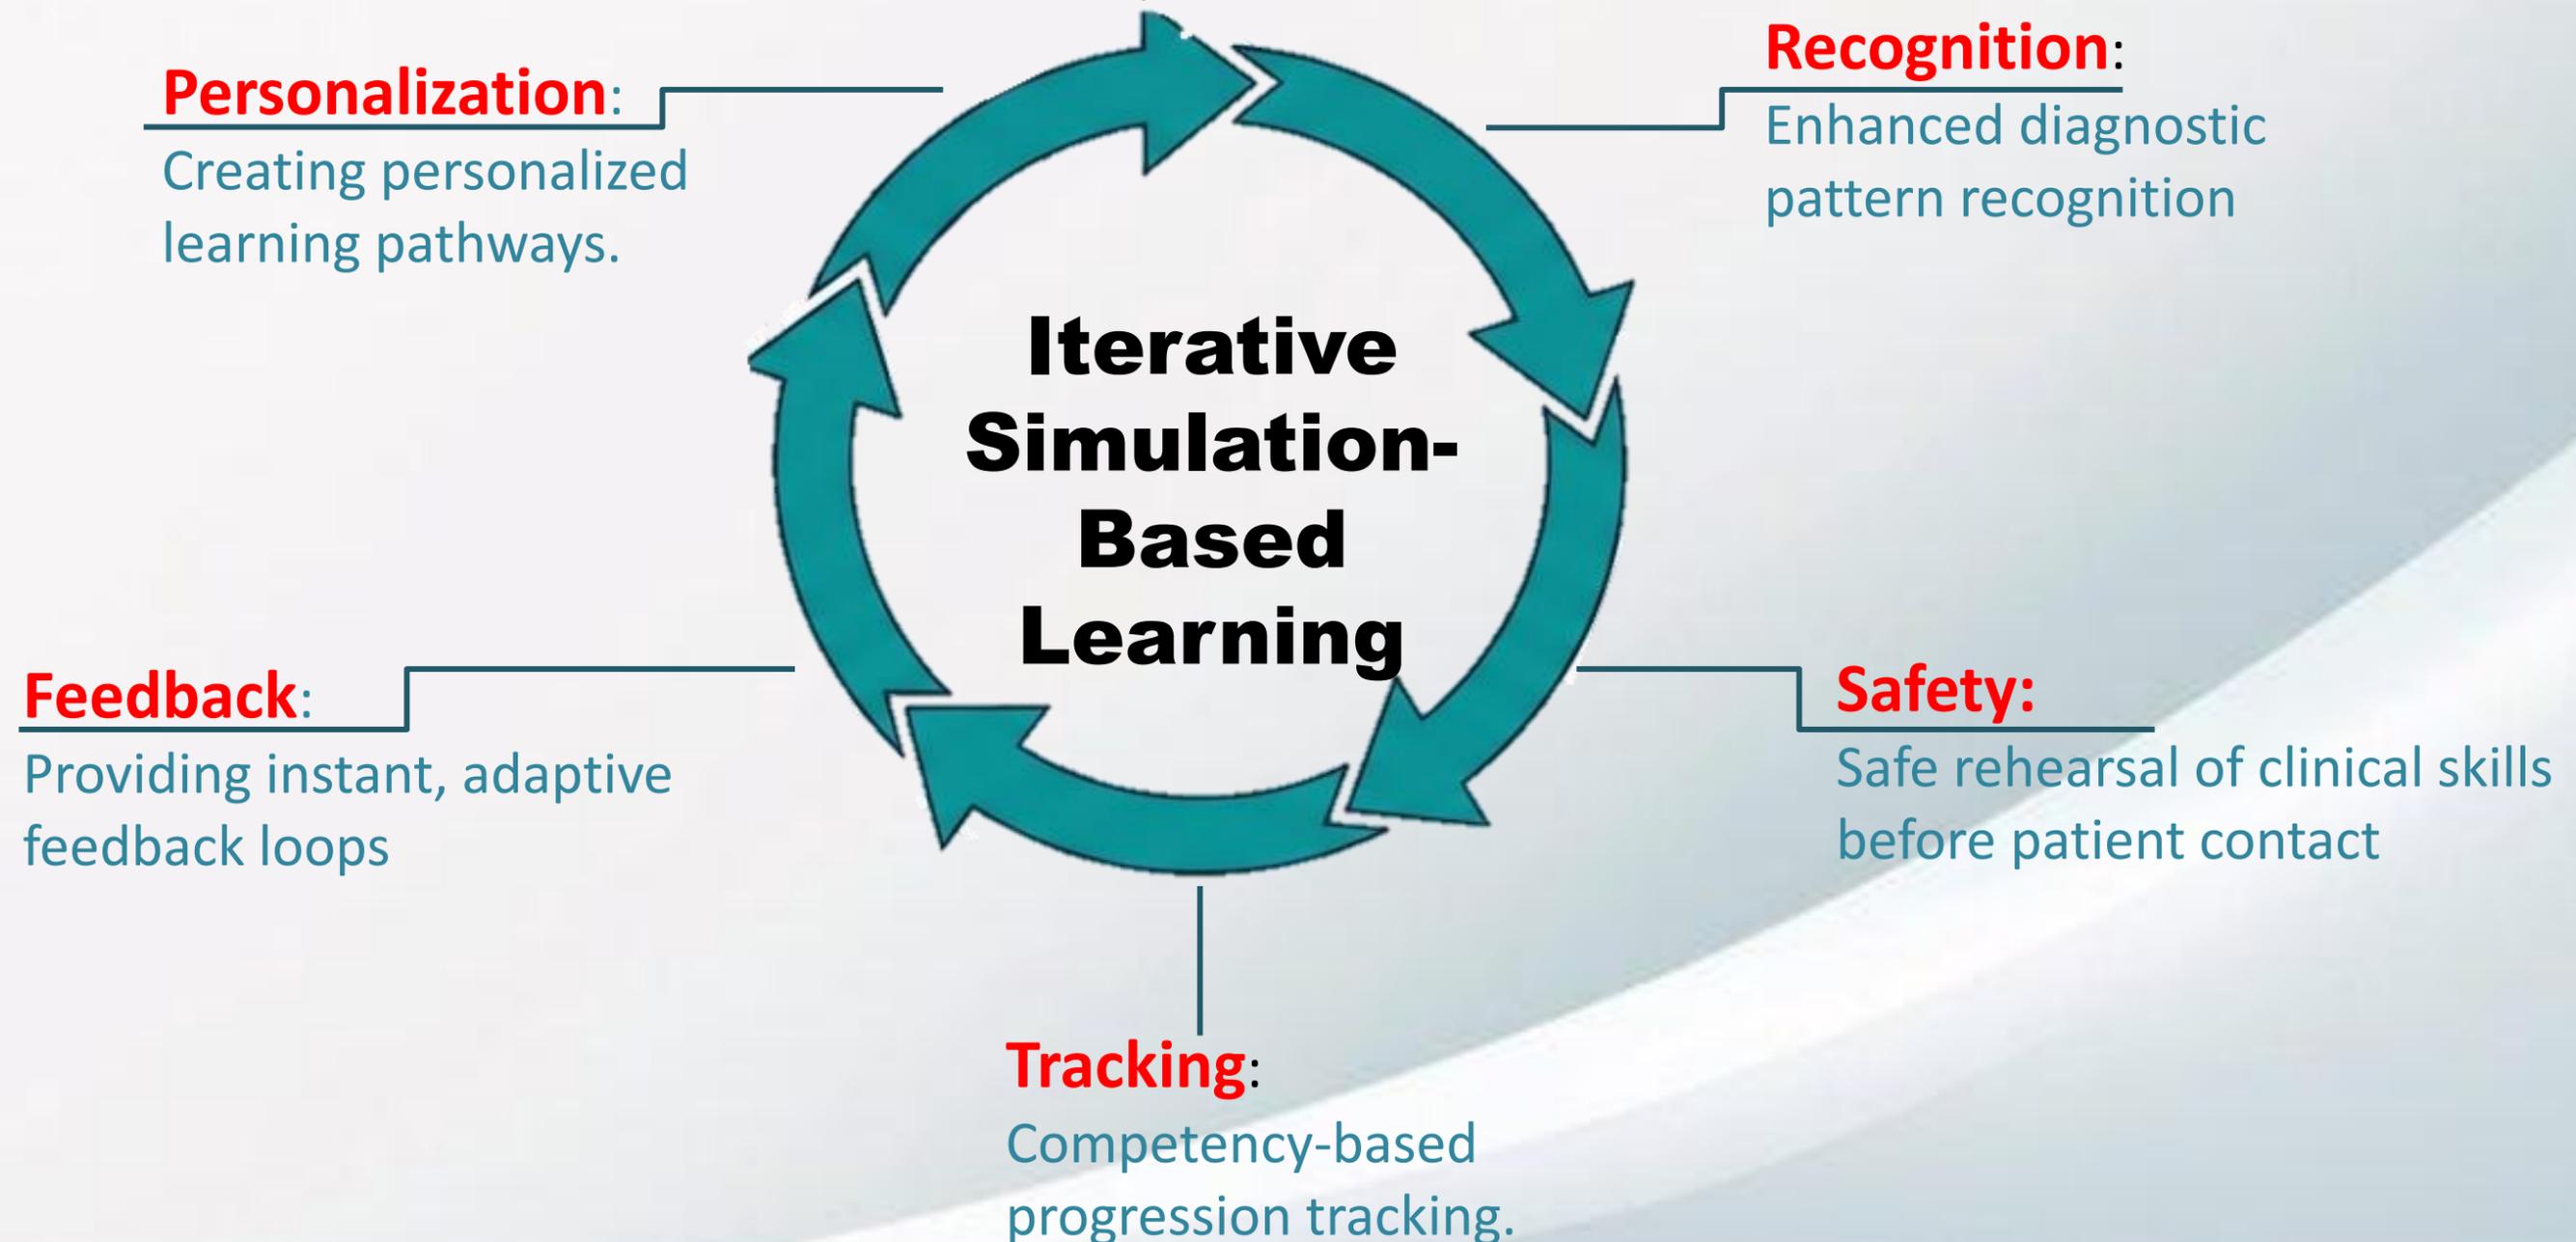

Implications:

- Analyzing ethical and pedagogical implications in undergraduate curriculum.

A Thematic Synthesis of Literature (2020-2025)

Enhancing Diagnostic Accuracy Through Adaptive Systems

The Risks of Algorithmic Opacity and Cognitive Offloading

Core Risks:

- Cognitive Offloading:** Students relying on AI outputs instead of developing independent reasoning.
- Reduced Independent Analytical Thinking.**
- Algorithmic Opacity:** Black-box systems where the reasoning is hidden.
- Data Privacy Concerns** in educational settings.
- Lack of Standardized AI Integration Guidelines.**

Critical Research Gap: There is insufficient research evaluating whether AI improves real-world bedside diagnostic performance (long-term outcomes).

Defining the Boundary: Cognitive Scaffold vs. Clinical Surrogate

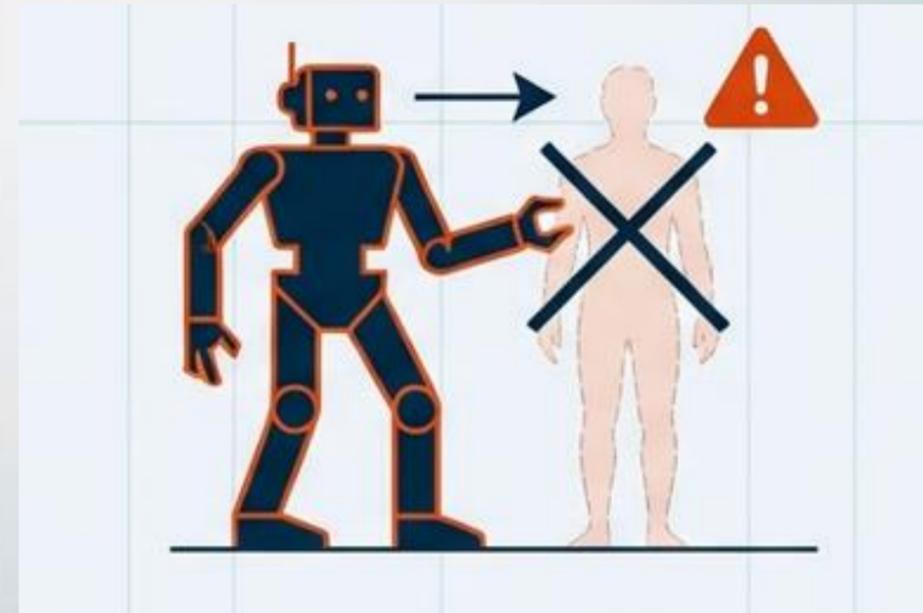

AI Must Be (Augmentative)

A tool for transparency, accountability, and support.

AI Must Not Be (Substitutive)

A replacement for bedside teaching or human mentorship.

“AI should function as a cognitive scaffold, not a clinical surrogate.”

Requirement: Need for AI literacy training embedded in medical curriculum.

Sustainable Integration Requires Preserving Human Judgment

AI demonstrates substantial potential to strengthen clinical reasoning and enhance individualized, competency-based training.

The Path Forward

-  **Address risks of overdependence immediately.**
-  **Preserve human judgment as the core competency.**
-  **Maintain robust bedside exposure.**
-  **Implement ethical frameworks for algorithmic transparency.**
